

DRIVE SYSTEMS

- **PRODRIVE I** – this proportional drive replaces the cable controls with an electronic system which delivers a totally smooth proportional drive. An operator on the machine for the first time can inch up to the workplace to the last centimetre with confidence. The machine always responds smoothly - even if the controls are “snapped”. The perfect answer for hire machines which are used by multiple operators.

- **TANDEM DRIVE** – the most popular drive for more powerful and stable performance. The oscillating beam suspension irons out the humps and hollows, keeping the drive wheels on the ground at all times. The low ground pressure of this drive system enables these machines to operate in the most difficult locations with ease.

- **SP (SPECIAL PERFORMANCE)**
The perfect choice where tough conditions are encountered, this package starts with a bigger engine. A Vee twin which delivers smooth gutsy power to oversize hydraulic pumps and wheel motors. The result, smooth powerful drive to pull you through the toughest spots with ease.
